Cascade Health Molecular Pathology

CLIA License #00F0000000
(fictional identifiers — sample only)
CAP Accredited #0000000

PATIENT

NAME
Sophia Reyes (fictional)

PATIENT ID / MRN
SAMPLE - 55289

DATE OF BIRTH
02/22/1981 (Age 45)

GENDER
Female

SPECIMEN
SOURCE
Subcutaneous Nodule, FFPE

COLLECTION DATE
August 4, 2026

REPORT DATE
August 8, 2026

CARE TEAM
ORDERING PHYSICIAN
Dr. Aris Thorne, MD — Cutaneous
Oncology
REPORTING PATHOLOGIST
Dr. Julian Vance, MD, FCAP —
Director, Genomic Medicine

B CLINICAL DIAGNOSIS & BIOMARKERS

Metastatic Cutaneous Melanoma — Epithelioid Cell Type

Staging: Stage IV — cT4b, N2a, M1d (brain & cutaneous involvement)
ECOG Performance Status: 0

PD-L1 TPS
45% — Positive

S100 / MELAN-A
Positive

TMB
18.2 Mut/Mb — High

MSI
Stable

C TARGETED NGS — GENOMIC ALTERATIONS

GENE	VARIANT	VAF	CLASS	SIGNIFICANCE
BRAF	c.1799T>A (p.Val600Glu / V600E)	52.4%	Pathogenic	BRAF/MEK inhibitor sensitivity
TERT	-124C>T Promoter Mutation	41.0%	Pathogenic	Telomerase activation
CDKN2A	p.Pro81Leu	22.8%	Pathogenic	Cell cycle control defect

D CLINICAL HISTORY TIMELINE

- DISCONTINUED MAY 2026
1st-Line Systemic Therapy
Nivolumab + Ipilimumab (4 cycles) → Nivolumab maintenance; discontinued due to immune-mediated colitis
- COMPLETED JUNE 2026
Local Control
Stereotactic radiosurgery (SRS) to 2 brain lesions

E BASELINE LAB & ORGAN FUNCTION

ANC
1.2 ×10³/μL
(Ref: 1.5–8.0)

Mild Neutropenia

Platelet Count
195 ×10³/μL (Ref: 150–450)

Normal

eGFR (Renal)
71 mL/min/1.73m²
(Ref: >60)

Normal

ALT / AST
32 / 29 U/L (Ref: <35)

Normal

CNS Imaging Status

2 stable treated brain lesions – no
edema/progression

Treated Stable CNS

PATHOLOGIST IMPRESSION

Tumor exhibits actionable BRAF V600E mutation with high TMB (18.2 Mut/Mb).
Treated brain lesions demonstrate radiologic stability without surrounding
edema.

RECOMMENDATION

Strong candidate for targeted BRAF/MEK combination therapy protocols or
novel tumor-infiltrating lymphocyte (TIL) cellular therapy trials.

Dr. Julian Vance, MD, FCAP
