4820 Harborview Terrace, Suite 210, Bellevue, WA 98004 · Division of Molecular Diagnostics

CLIA License #00F0000000

CAP Accredited #00000000

(fictional identifiers — sample only)

Integrated Pathology & Molecular Diagnostic Report

SPECIMEN ID: SAMPLE-0000000

A PATIENT DEMOGRAPHICS & SPECIMEN METADATA

PATIENT NAME

Eleanor Vance (fictional)

PATIENT ID / MRN

SAMPLE-90412

DATE OF BIRTH

04/18/1968 (Age 58)

ORDERING PHYSICIAN

Dr. Claire Sterling, MD — Gynecologic Oncology

GENDER

Female

REPORTING PATHOLOGIST

Dr. David Holbrook, MD, FCAP

SPECIMEN TYPE

FFPE Tissue (Formalin-Fixed Paraffin-Embedded)

COLLECTION DATE

August 1, 2026

PRIMARY SPECIMEN SOURCE

Omental Metastasis Biopsy

REPORT DATE

August 5, 2026

B CLINICAL DIAGNOSIS & HISTOPATHOLOGY SUMMARY

High-Grade Serous Ovarian Carcinoma (HGSOC)

Histologic Grade: Grade 3 (High Grade)

Clinical Staging: Stage IVB — cT3c, N1, M1b (pleural effusion & extensive peritoneal involvement)

ECOG Performance Status: 1 — Ambulatory, capable of light work

MARKER	RESULT	METHOD
HRD Status	Positive — GIS Score 62	Genomic Instability Score
FOLR1 (Folate Receptor Alpha)	High Expression — IHC 3+, 85% membrane staining	IHC

C NEXT-GENERATION SEQUENCING — GENOMIC PROFILE

GENE	VARIANT / ALTERATION	ALLELE FREQ.	CLASSIFICATION	CLINICAL SIGNIFICANCE
BRCA2	c.5946delT (p.Ser1982Rfs*22)	48.0% (Germline)	Pathogenic	PARP inhibitor / platinum high sensitivity
TP53	c.818G>A (p.Arg273His)	54.2% (Somatic)	Pathogenic	Loss of tumor suppressor function
CCNE1	Amplification (Copy Number: 8)	N/A	Pathogenic	Potential resistance to PARP inhibitors

TUMOR MUTATIONAL BURDEN

6.2 Mut/Mb

TMB-Low

MICROSATELLITE STATUS

Stable (MSS)

Stable

HRD

Positive

Positive

D

TREATMENT HISTORY

- THROUGH MAR 2026 — COMPLETED

Primary Therapy

Carboplatin + Paclitaxel (6 cycles) with Bevacizumab maintenance
- JUL 2026 — PROGRESSION EVENT

Recurrent Disease

Rising CA-125 (480 U/mL) with new peritoneal seeding noted on imaging

E

CURRENT LABORATORY & ORGAN FUNCTION PANELS

as of Aug 5, 2026

PARAMETER	RESULT	REFERENCE RANGE	STATUS
eGFR (Kidney Function)	42 mL/min/1.73m ²	> 60	Borderline Impairment
Serum Creatinine	1.48 mg/dL	0.59 – 1.04	Mild Elevation
Absolute Neutrophil Count (ANC)	1.9 ×10 ³ /μL	1.5 – 8.0	Adequate
Platelet Count	210 ×10 ³ /μL	150 – 450	Normal
ALT / AST	28 / 31 U/L	< 35	Normal
CNS Status	No evidence of intracranial metastases	—	Negative for CNS Lesions

F

PATHOLOGIST IMPRESSION & RECOMMENDATION

IMPRESSION

Tumor harbors a germline BRCA2 frameshift deletion alongside somatic CCNE1 amplification. Current renal clearance (eGFR 42 mL/min) is borderline for standard full-dose platinum regimens.

RECOMMENDATION

Patient is an excellent candidate for clinical trials evaluating novel Antibody-Drug Conjugates (ADCs) targeting Folate Receptor Alpha or ATR/CHK1 inhibitors, with lab waiver allowance for renal function.

Dr. David Holbrook, MD, FCAP
